- | | |
|-----------------------|--------------------|
| Adenine | Inherited |
| Allele | Karyotype |
| Amino acids | Meiosis |
| Blood Types | Mitosis |
| Cell reproduction | Mutagens |
| Chromosomes | Mutation |
| Cloning | Nitrogen bases |
| Codominant | Nondisjunction |
| Colorblindness | Parents |
| Cross-pollination | Pea plants |
| Cystic fibrosis | Phenotype |
| Cytosine | Plasmid |
| Daughter cells | Probability |
| Deoxyribonucleic acid | Proteins |
| DNA | Punnett square |
| Dominant | Purebred |
| Down Syndrome | Recessive |
| Ethics | Recombinant DNA |
| Family tree | Replication |
| Genes | Ribonucleic acid |
| Genetic code | RNA |
| Genetics | Self-pollination |
| Genotype | Sex chromosomes |
| Guanine | Sex-linked traits |
| Heredity | Sickle cell anemia |
| Heterozygous | Thymine |
| Homozygous | Traits |
| Hybrid | X chromosome |
| Incomplete dominance | Y chromosome |

Challenge:

The puzzle includes the last names of six people who have made contributions to the field of genetics. Who are they?
