

General Description of Site

Your site matrix is composed of a sandstone mixture found somewhere in the United States. It is believed to contain the fossilized remains of a creature that once roamed these lands.

Your site has been divided into four quadrants: A, B, C, and D. Each team is responsible for excavating one quadrant and making detailed journal entries. In addition, each team is required to complete a site map that shows the relative size and location of all fossil finds.

Site Names:

Sandstone Survey
Coprolite Caverns
Mesozoic Mesa
Jurassic Garden
Triassic Tribune
Cretaceous Crust
